

Financing Industry 4.0.  
Do you really need it?

# COMPANY HIGHLIGHTS

Epitaxial wafers

Photon Detectors

IR Detection Modules

## WHO ARE WE?

Founded in 1987, VIGO System consists of two manufacturing groups:

- **IR Detectors:** VIGO is the world's leader in customised, high-tech uncooled photodetectors of middle and long wavelength range for industrial, medical, transport, environmental protection, space and security & defence technology applications.
- **III-V Epi-foundry:** VIGO's epi-foundry team has over 30 years of epitaxy experience. They manufacture III-V semiconductor materials for photonics and microelectronics applications, such as lasers, diodes, transistors and detectors.

The outcome of VIGO's innovative approach and industry-wide experience is truly high-end products. Our devices are easy to use, robust and reliable. Our materials are characterised by low impurities level and high uniformity.

The company has multiple production lines for infrared, photonics and microelectronic devices!

# ABOUT US

**34** YEARS  
ON THE MARKET

**170**  
EMPLOYEES

**100,000**  
CAPACITY OF  
DETECTORS/YEAR

**10,000**  
CAPACITY OF  
EPI-WAFERS/YEAR

**6** DETECTORS  
ON MARS

**Unique technology** – 34 years of innovation and continuous improvement of the company's original concept

**Value for money**  
– the best quality to price ratio

**Custom-fit solutions** – flexibility to tailor and test solutions that respond to the most demanding customer requirements (e.g. NASA, military industry)

**R&D capabilities** – world-class scientific R&D expertise with access to and affiliation with major academic research institutions (e.g. MIT, Princeton, Fraunhofer Gesellschaft)

**Research projects**  
– coordinator of and commercial partner in a number of national and EU research projects (e.g. Horizon 2020, POIR)

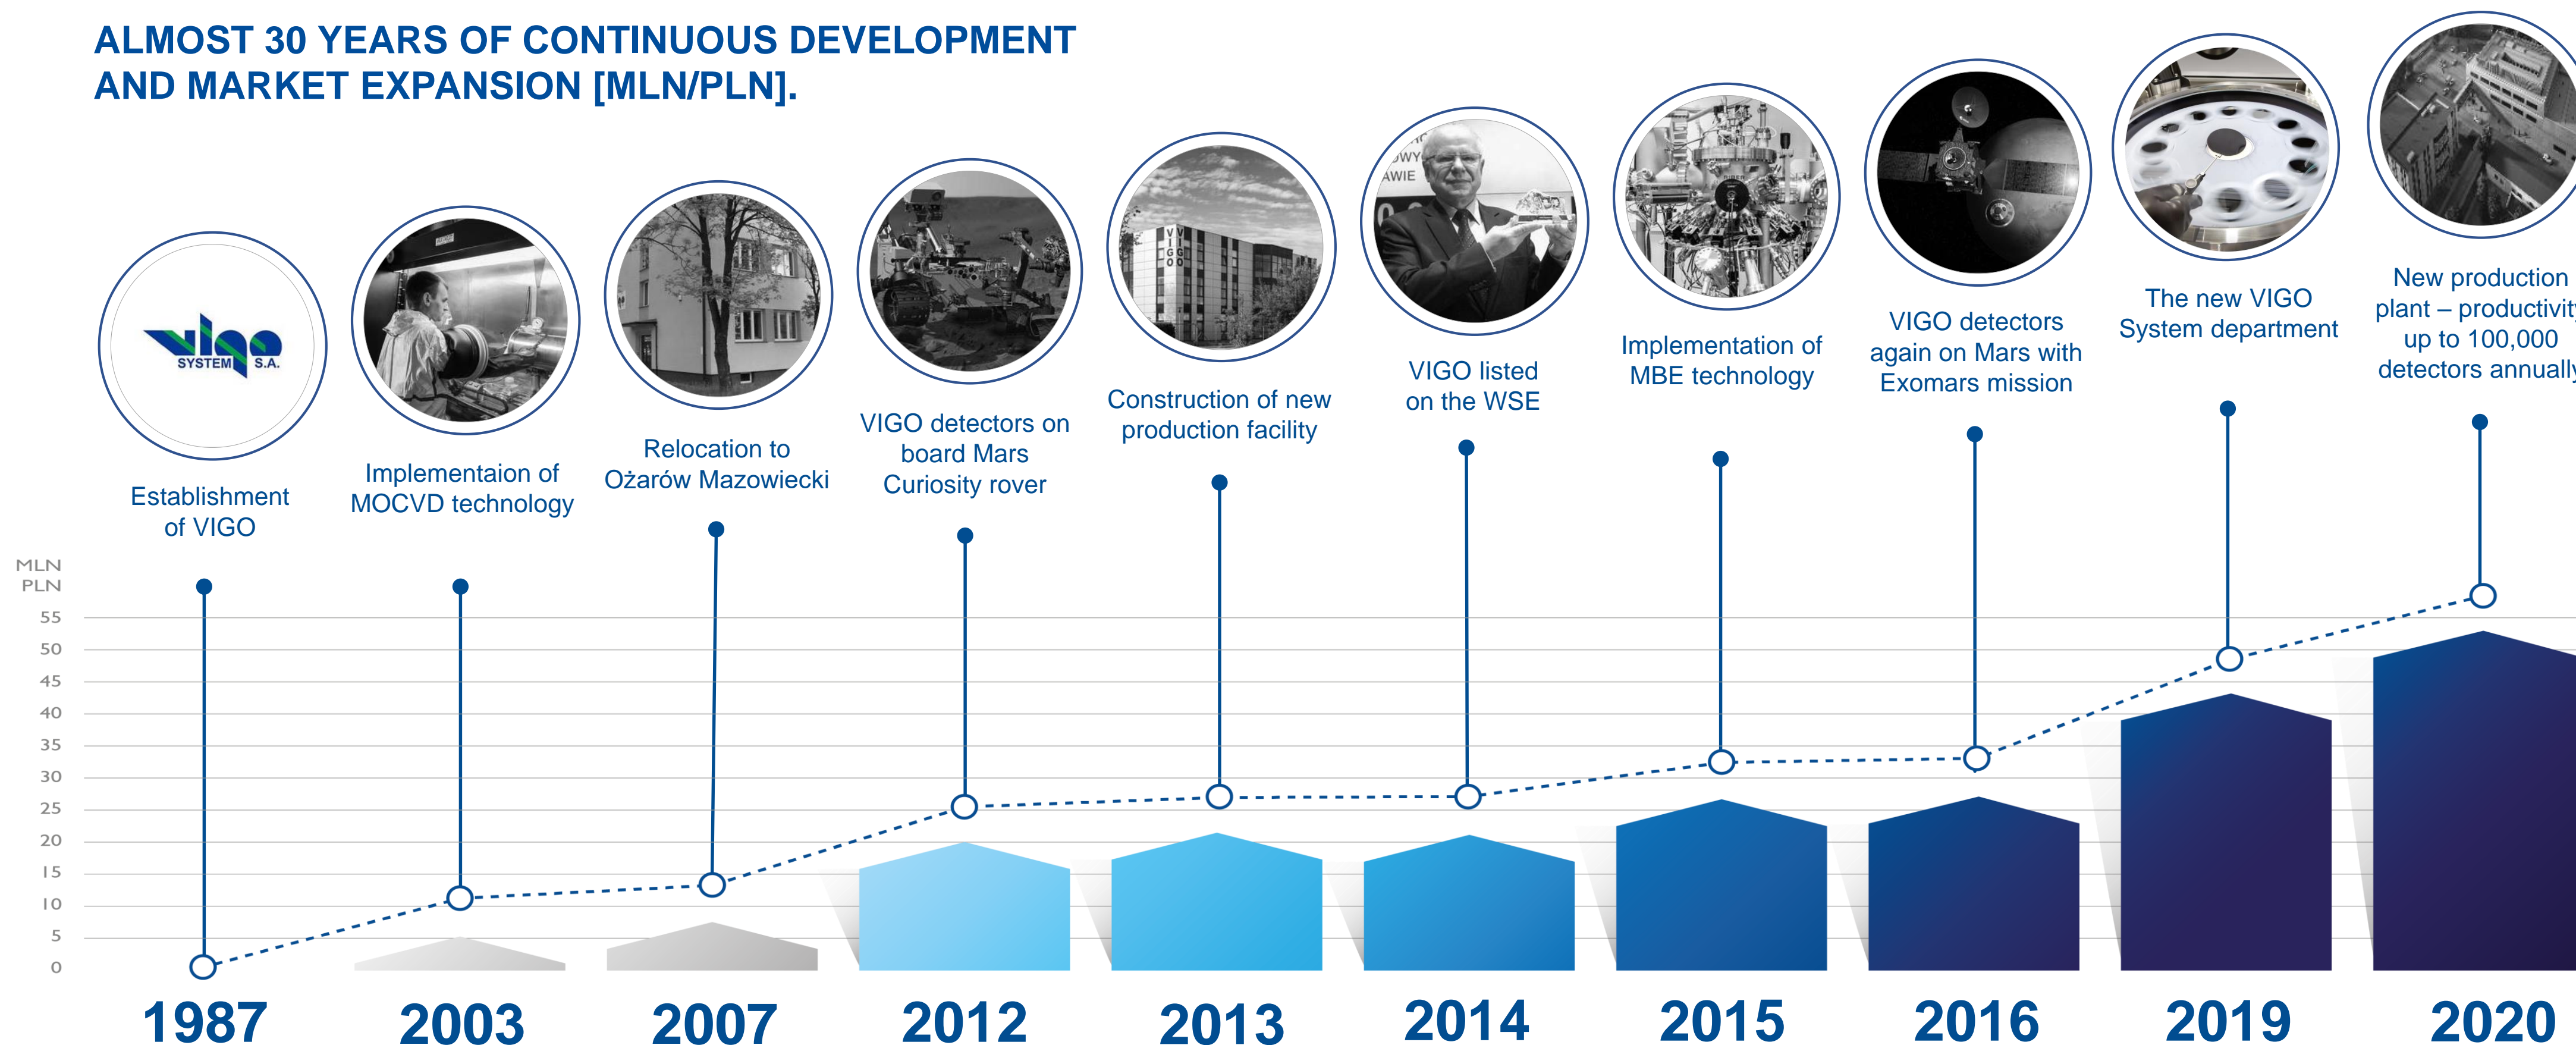

**Highly educated and experienced personnel** – friendly atmosphere promoting creativity and innovation 170 employees (1 professor, 14 PhDs and >60 engineers),

# ABOUT US

ALMOST 30 YEARS OF CONTINUOUS DEVELOPMENT  
AND MARKET EXPANSION [MLN/PLN].

COMPANY CAPITALISATION  
**2020 = 100 M EUR**

# ABOUT US

IN BUSINESS RELATIONS WITH GLOBAL CORPORATIONS  
VIGO SYSTEM HAS BECOME A SUPPLIER FOR

Safran Aerotechnics  
(optoelectronics systems)

Emerson Electric Co.  
(industrial gas analysers)

Caterpillar  
(railway sensor systems)

TRUMPF  
(laser industry)

## MARKET SPLIT 2019

VIGO System has become  
a supplier of high-tech  
components for the most  
demanding customers.

# PRODUCTION CAPACITY

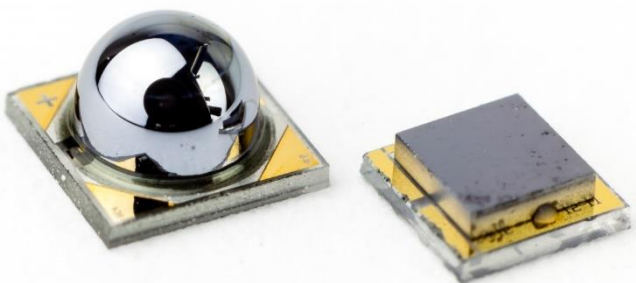

COMPLETE PRODUCTION LINE FOR INFRARED SEMICONDUCTORS AND PHOTONIC DEVICES (FROM NEAR TO FAR INFRARED)

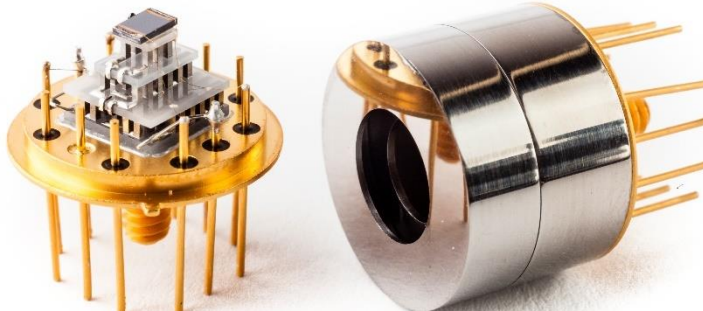

IR DETECTORS  
(FROM NEAR TO FAR  
INFRARED)

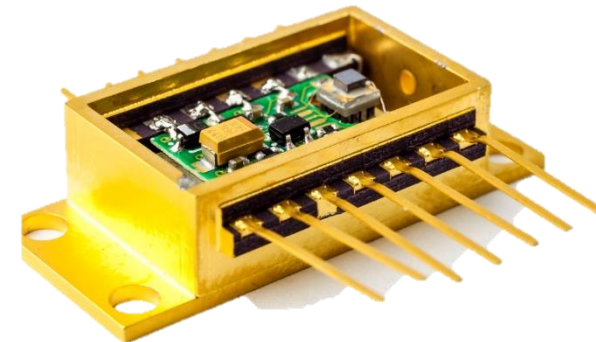

Epitaxy  
Semiconductor wafer

Processing  
Detection chips

Micro assembly  
Infrared detectors

Integration with electronics  
Detection modules

The collage is divided into four quadrants, each representing a key application area:

- HEALTHCARE:** Top-left quadrant showing a medical professional in a white coat and blue gloves using a handheld device connected to a monitor displaying vital signs.
- TRANSPORT:** Top-right quadrant showing a high-speed train traveling on tracks.
- ENVIRONMENTAL PROTECTION:** Bottom-left quadrant showing a view of Earth from space, highlighting the atmosphere and clouds.
- DEFENSE AND SECURITY:** Bottom-right quadrant showing a military tank in a combat environment.

In the center of the collage is a circular inset containing three electronic components: a cylindrical component, a small green circuit board, and a gold-colored component.

Sensor Type	Percentage
Pressure sensors	36,0%
Temperature sensors	26,2%
Light sensors	17,3%
Chemical sensors	10,2%
Motion sensors	8,4%
Other	2,0%

# VIGO SYSTEM – PAST

Niche market?

No mass  
products  
development

Unique  
production,  
manufacture

Application in  
high-end system

High product  
prices

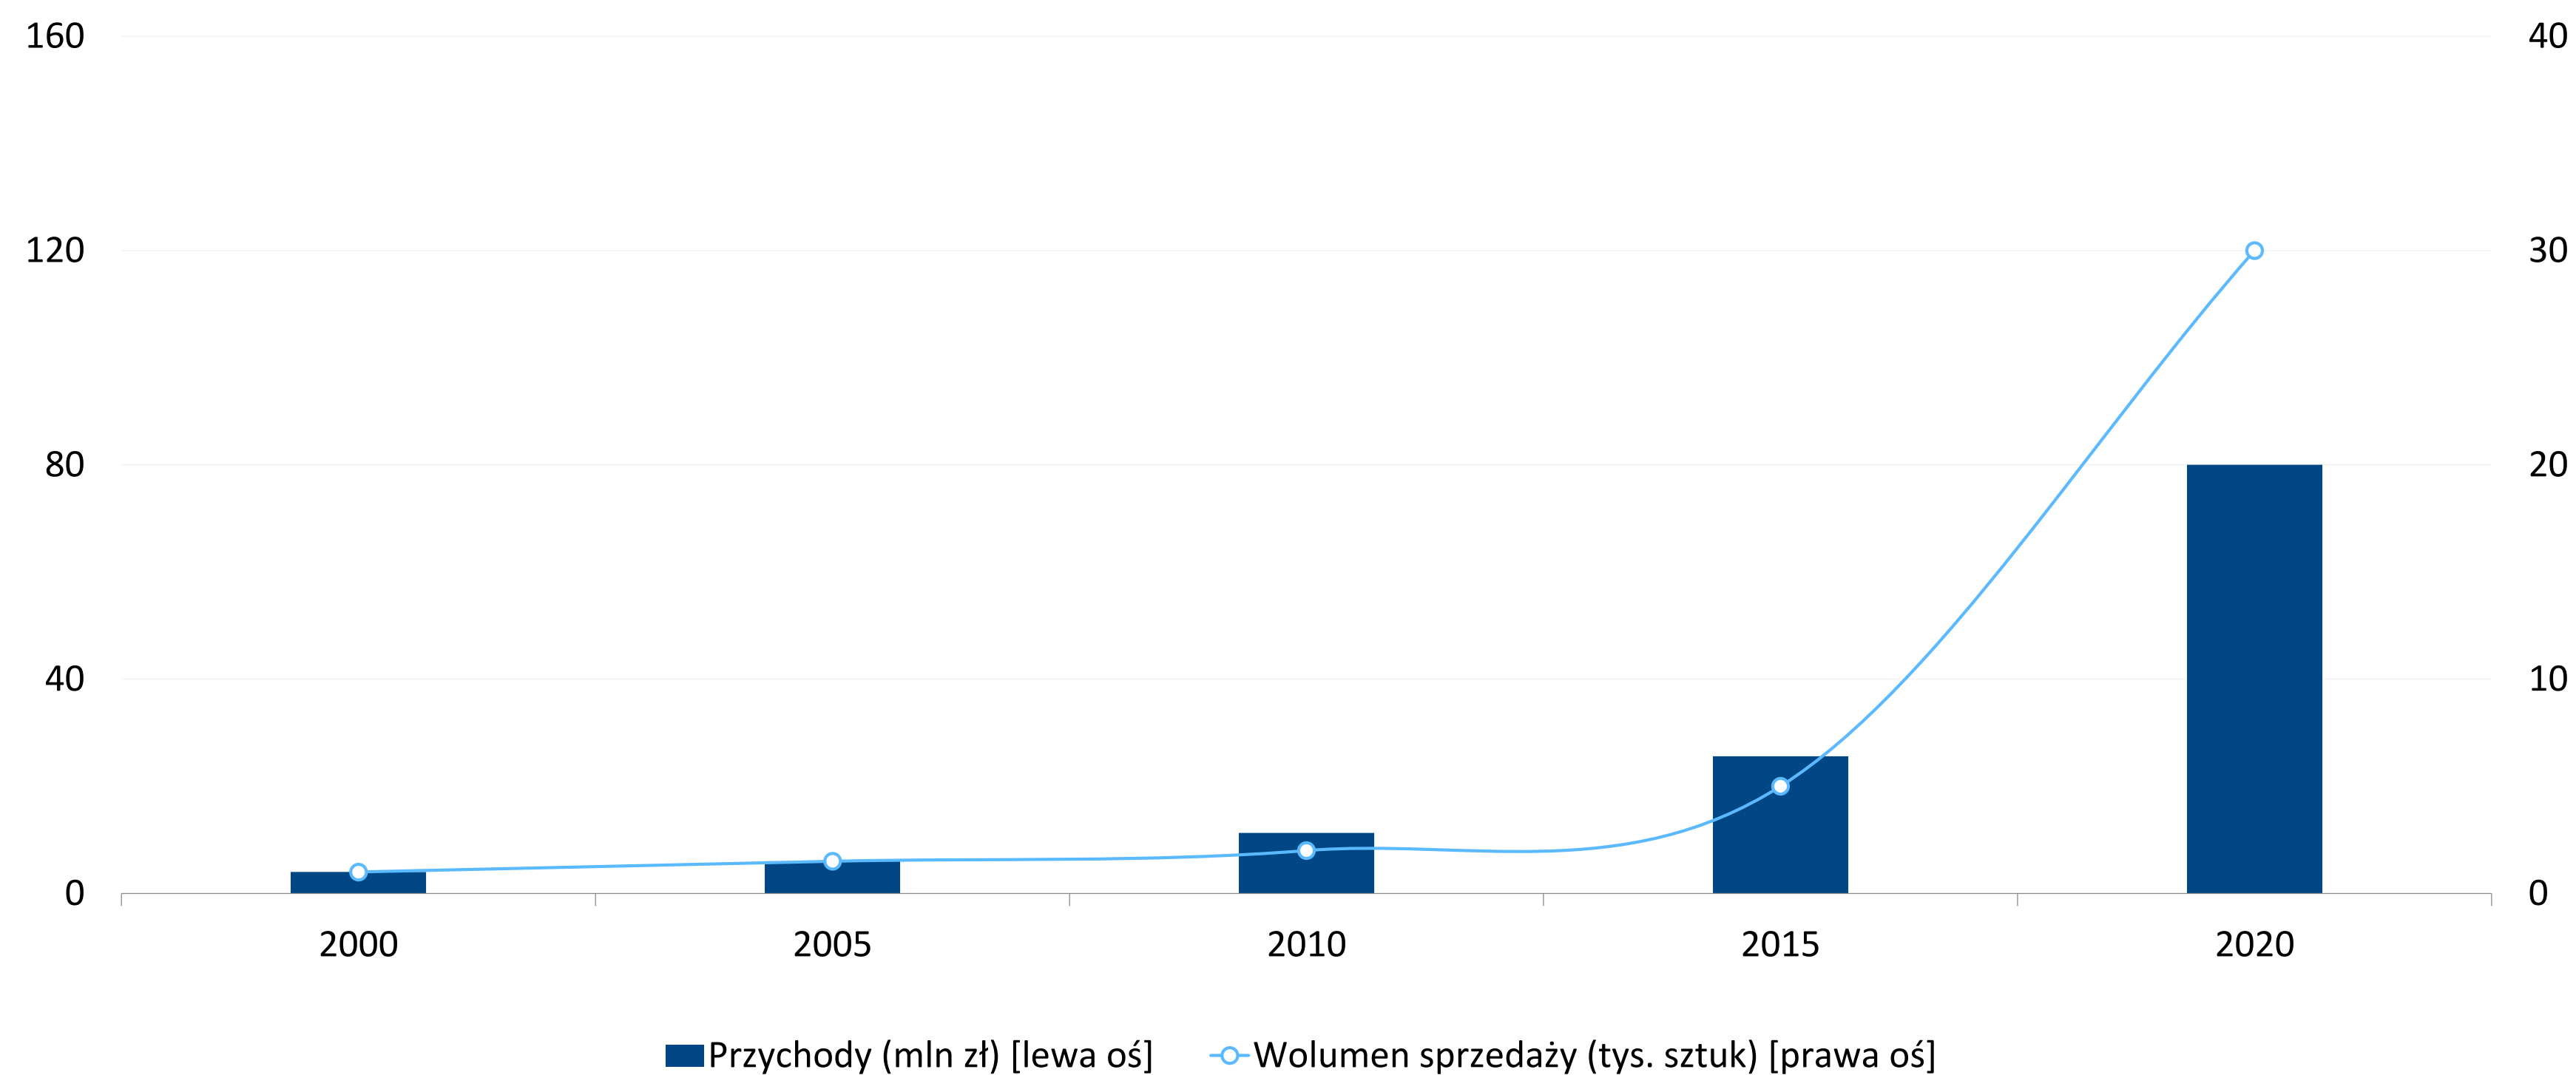

# VIGO SYSTEM – STRATEGY 2020

## Goals:

- 20-times higher sales volume
- Lower unit price

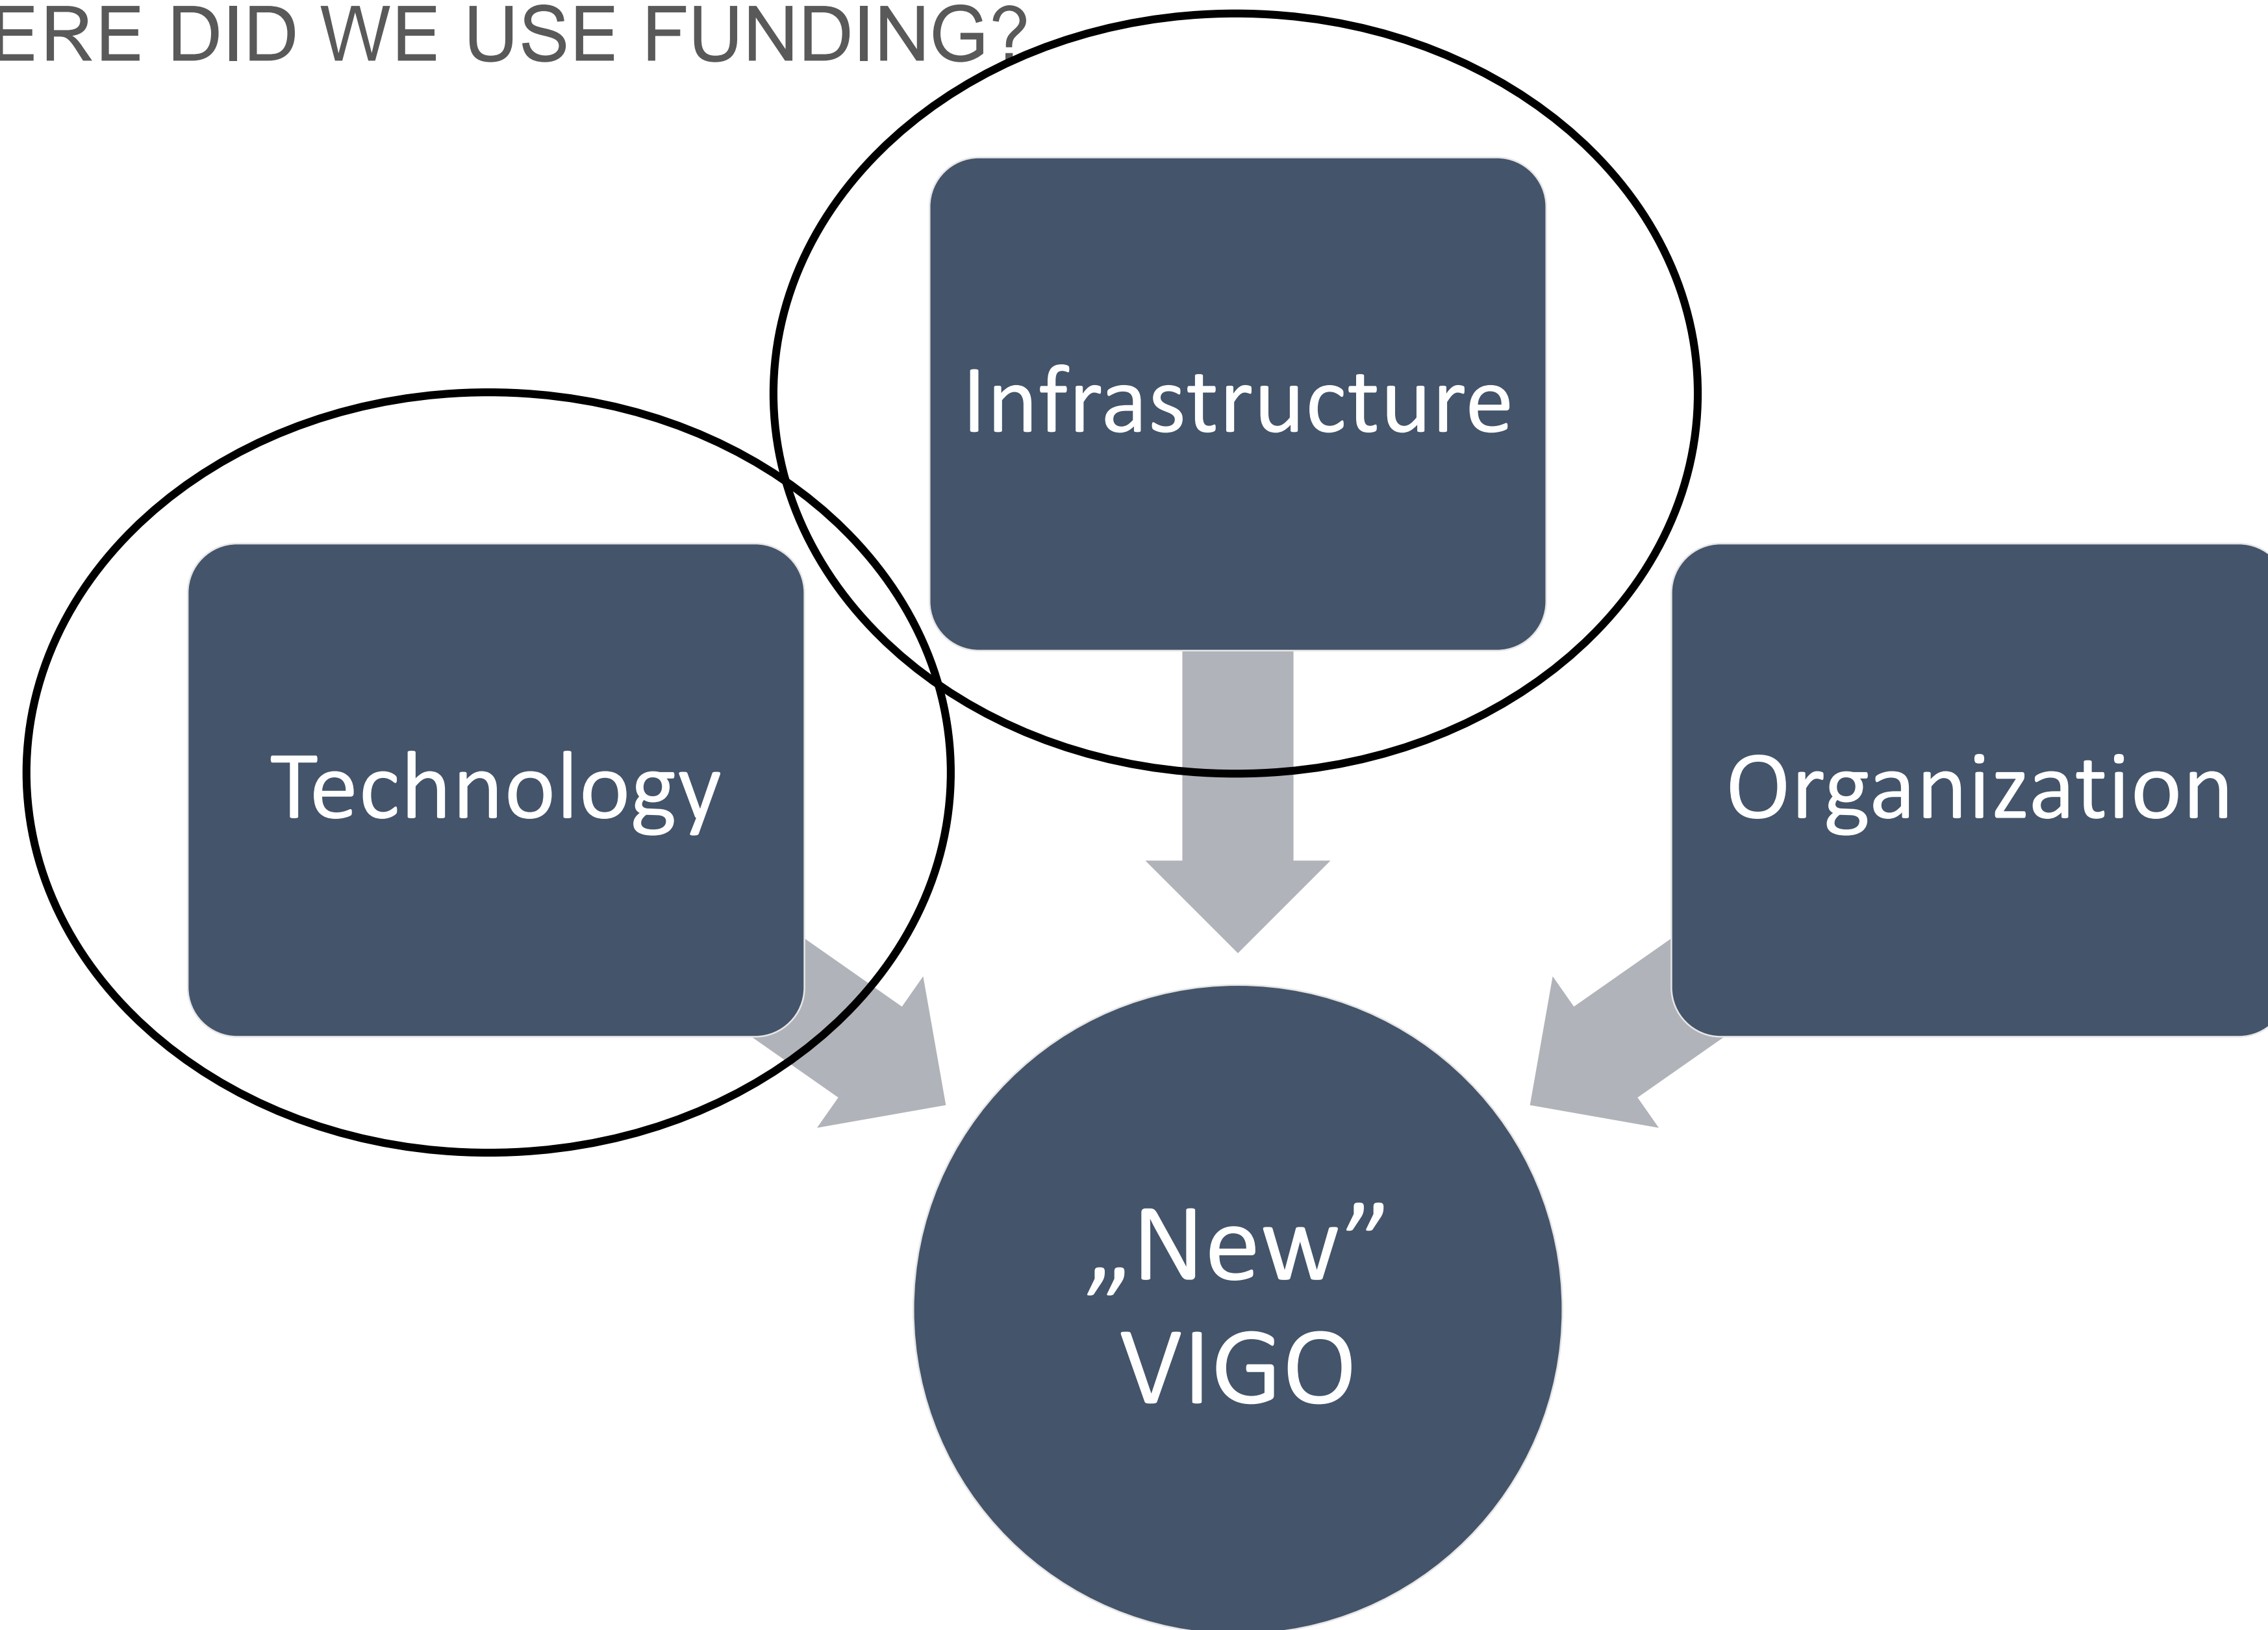

# WHAT WE NEEDED TO ACHIEVE GOALS?

# WHERE DID WE USE FUNDING?

# OUR PRODUCTION IN 2016

Laboratory-industrial production

Different assembly stations

Unique manual assembly

Own database applications +ERP

Production management through google sheets

40 different software application

No integration of software

**2016 = 5 000 detectors**  
(produced)

- 50% series production
- 50% unique production

**2023 = 100 000 detectors**

- 95% series production

# VIGO TODAY

Throughout the last 5 years, VIGO System invested **PLN70 milion (15,5 mln EUR)** in the development of production capacity, new organisation, and processes automation, thus transforming from a manufacture of advanced detectors into a modern production plant.

Detectors production statistics (in units)

## Co-financed projects:

- Technological innovation loan (~27% covered by financing)
  - New building, its infrastructure, furnishings and machines (hermetization, flipchip, wirebonder, robot, MES etc.)
  - New cleanroom for wafer production and processing of structure (infrastructure and machines)
- Own financing:
  - **Digitalization of processes**
  - Developed measurement stands

- Faster growth
- Possibility to finance large infrastructure projects
- Partially financed
- Not good for fast changing technologies
- Long procedures
- Well defined, what you want to buy
- Difficult changes in the scope
- Additional personnel for administration of the project

# TECHNOLOGY EVOLUTION

# CURRENT AND PAST RESEARCH PROJECTS

Ultra-broadband infrared gas sensor for pollution detection

MIRPHAB (Mid InfraRed PHotonics devices fABrication for chemical sensing and spectroscopic applications) <https://www.mirphab.eu/>

Broadband Tunable QCL based Sensor for Online and Inline Detection of Contaminants in Water

Compact High pErformance QUantum cascadE laseR Sensors

High sensitivity, portable photonic device for pervasive water quality analysis

Programmable multi-wavelength Mid-IR source for gas sensing

The National Centre for Research and Development

## Sensors for Industry 4.0

Single and multielement detectors for Industry 4.0

## MIRPIC

Demonstrator of the Photonics Integrated Circuit for Mid IR (3,5 – 5 $\mu$ m)

How do we use money for technology?

- New products
- New products features
- New production technologies

What did it bring to us?

- we can react faster to client demands
- Contact with end-users
- Development of our product roadmap
- Full usage of infrastructure

- Clear vision of new products
- Product development roadmap
- Technology development roadmap
- Cooperation with technological partners
- Networking
- Cooperation with end users

- IP protection
- Not always we do what was written in the proposal – changes in the project
- Long time from application to financing

# Financing Industry 4.0. Do you really need it?

WE ARE OPEN FOR COOPERATION 😊

.... AND QUESTIONS 😊

A decorative graphic in the top left corner consisting of a white hexagonal grid pattern on a blue background.

THANK YOU
